

Nova 10X Tris-Glycine Ready-Mixed Powder

Reference: AB15024

1 of 1

INTENDED USE AND PRESENTATION:

Ready-mixed Tris-Glycine Buffer powder is widely used in molecular biology research.

AB15024, for 1 L.

For research use only.

SUMMARY, EXPLANATION AND LIMITATIONS:

Ready-mixed buffers in powder format to be dissolved in 1 L of distilled water – safe transport, convenient and excellent quality.

On dilution, the resultant 1X Tris-Glycine will have final concentration: 25 mM Tris, 192 mM glycine, pH 8,3.

APPLICATIONS:

Tris-glycine buffer is used to make a Tris-glycine-methanol transfer buffer, which is the most common protein transfer buffer for wet blot transfers. The methanol prevents the gel from swelling during the transfer and enhances the protein binding to nitrocellulose. The 10X Tris-glycine buffer is diluted to 1X with methanol and water to make a solution containing 20% methanol.

PRODUCT COMPOSITION:

This product is provided as a powder.

REQUIRED MATERIALS BUT NOT SUPPLIED:

All reagents, materials, and laboratory equipment for PCR and determination procedures are not provided with this reagent. This includes sterile reaction tubes, micropipettes and tips, template DNA, gen-specific PCR primer pair, dNTPs mixture, PCR grade H₂O, heat pretreatment equipment (thermoblock, microwave), centrifuge, cold store and thermal block cyler.

Buffered solutions for DNA extraction or purification, enzyme treatments, highly sensitive detection systems, and other auxiliary reagents are available from Genova Scientific.

STORAGE AND STABILITY:

Store at room temperature until the expiration date printed on product label. Avoid prolonged exposure to light. Do not use after the expiration date. If the product is stored under different conditions from those stipulated in these technical indications, the new conditions must be verified by the user. The validity period of the ready to use products when opened, is the same as the expiration date indicated on the label of intact product.

Genova Scientific guarantees that the product will maintain all of the described characteristics from the production date until the expiration date, as long as the product is stored and used as recommended. No other guarantees are provided.

Under no circumstances Genova Scientific is obliged to cover damages caused by use of this reagent.

TROUBLESHOOTING:

If unusual banding is observed or any other deviations from the expected results, please read these instructions carefully, along with the instructions from the PCR and determination systems. If this does not solve the problem, please contact Genova Scientific's technical support department (techsupport@genovalab.com) or your local distributor.

PRECAUTIONS:

Use only by qualified personnel.

Use proper protective equipment in order to avoid contact with reagents and samples in the eyes, skin, and mucosal tissues. In case of contact with sensitive areas, immediately flush the affected area with water. Avoid microbial contamination of the reagent, as this may produce nonspecific amplification results.

Material safety data sheet (MSDS) is available upon request.

PERFORMANCE CHARACTERISTICS:

Genova Scientific has performed studies to evaluate the functioning of this ladder for use with standard visualization and determination systems, concluding that the product is both specific and sensitive for determination performance.
